

SECUREVAULT

SecureVault implements multiple layers of validation, exception handling, and security checks to ensure stability, prevent unauthorized access, and safely handle unexpected user behaviour without crashing the application. Our encryption and decryption application aligns with United Nations SDG 9 (Industry, Innovation and Infrastructure), SDG 16 (Peace, Justice and Strong Institutions), by promoting secure digital infrastructure, protecting sensitive user data from cyber threats and unauthorized access, and increasing awareness about cybersecurity and safe digital practices. Through modern encryption techniques, the project helps strengthen privacy, reduce risks of data breaches and cybercrime, and encourage responsible use of technology in today's increasingly digital world
